

Can be loaded easily and flexibly: varioFlex baskets

The upper basket is equipped with up to three foldable, dividable levels and two flip tines, and the bottom basket with up to four flip tines. This gives you flexibility during loading. In addition, the handles on the two baskets make them easier to slide out.

Not just for your cutlery, but also for your espresso cups: the varioDrawer

The varioDrawer offers an additional loading level. Thanks to its special design it not only provides room for cutlery, but also for ladles and salad servers. And as there is no longer a cutlery basket in the bottom basket, there is now more space for crockery.

Loading lots of dishes is easy:

The basket is equipped with special devices at the top. If they are pressed, the height of the top basket can be easily adjusted in three stages. That makes loading and unloading simpler, particularly when dealing with large pots or plates.

Specialized in gentle cleaning: The Glass 40 °C cycle

Fine glassware requires special care in cleaning. Siemens' new Glass 40 °C cycle is specifically designed to meet this need. It first cleans glasses carefully but thoroughly at low temperatures. This is followed by a drying phase which has been specially extended for extra-gentle drying. The results are impressive: gleaming glassware you'll be able to enjoy for a much longer time.

For particularly dry dishes: extraDry

If you wish to wash a lot of plastic dishes, select the new Siemens extraDry programme. It uses higher temperatures for the drying process and extends the drying phase. Every plastic item will be dried optimally.

Optimum dishwashing results at the touch of a button: autoProgramme

After the autoProgramme button has been pressed, aquaSensor checks how dirty the water is and controls when and how much clean water is added as well as the dishwashing temperature.

Clean less: antiFingerprint

The antiFingerprint feature puts an end to annoying fingerprints on stainless steel.

Efficient, durable and quiet: the iQdrive motor

Lower energy consumption with identical performance, short programme times with optimum results and always nice and quiet whatever the programme – all that is not a problem for the iQdrive motor. And on top of all these advantages, it runs virtually free from wear.

Releases the full strength of the detergent: dosageAssist

The cleaning tablet falls directly into a small catch pan thanks to dosageAssist. A precisely aimed jet of water quickly dissolves it. The detergent is distributed evenly throughout the machine, always guaranteeing optimum cleaning results for you.

Protection against water damage: Multiple water protection

The multiple water protection system protects against water damage of any kind, whether in the supply hose or from a leak in the machine.

Antibacterial dishwashing: HygienePlus function

The HygienePlus function is ideal for washing containers and utensils to stringent standards. During the final rinse, the temperature is kept at a constant high level of up to 70 °C for approx. 10 minutes, eliminating up to 99.99% of all bacteria and germs.

Mechanical door lock

Mechanical door lock to prevent unintended access during dishwashing.

Gentle, safe, clean: the glassCare System

The glassCare System – consisting of glass protection technology, a special gentle programme, and a heat exchanger – will wash your glassware with the greatest of care.

10-year warranty against rusting through* of the inner tub of a Siemens dishwasher

In addition to innovative technology, you can expect one thing in particular from a Siemens dishwasher: durable quality. The inner tubs of all Siemens dishwashers feature the use of high-quality stainless steel sheets, production and connection technologies adapted to the specific materials, and a special surface treatment. That's why we're one of the few manufacturers who also provide a full 10-year warranty against rusting through of the inner tub.

*Online registration required within 8 weeks after delivery.
